SUMMARY

Full-stack developer with production experience across React, Node.js and TypeScript, now building AI engineering skills through active contribution to OnCallOps — a multi-tenant, LangGraph-based AI voice-agent platform. Comfortable owning backend correctness under real constraints (concurrency, idempotency, multi-tenant data isolation) as well as end-to-end feature delivery in agile teams. Looking for AI Engineer or Full-Stack roles in Melbourne.

SKILLS

- **Languages:** JavaScript/TypeScript, Python, HTML5/CSS3, PHP
- **Frontend:** React.js, Next.js, Ant Design, Chakra UI, Bootstrap, Styled-components, React-Router, Hooks
- **Backend:** Node.js, Express, RESTful APIs, Python services
- **AI/LLM:** LangGraph-based conversational agent runtimes, OpenAI API, Anthropic Claude API, deterministic guardrail design around LLM tool-calling, structured data extraction from LLM output — currently expanding into RAG
- **Database:** MongoDB, Mongoose, MySQL
- **Cloud & Tools:** AWS (S3 — presigned URLs & object lifecycle, Elastic Beanstalk deployment), Vercel, Docker, Git/GitHub, GitHub Actions (CI/CD — lint/typecheck/test/build, Playwright E2E), Jest/pytest, Jira, Trello, Bitbucket, Postman
- **Methodologies:** Agile/Scrum, code review, sprint planning

EXPERIENCE

AI & Full-Stack Engineer — OnCallOps (Freelance team project, 9-person team)

05/2026 – Present

Melbourne (Remote)

- Backend contributor on a multi-tenant AI voice-agent SaaS that lets an AI answer overflow phone calls for trade businesses, built on a LangGraph conversation runtime with deterministic guardrails wrapping every LLM decision.
- Built the booking & capacity subsystem in Python: atomic slot holds and idempotent booking confirmation under concurrent requests, an idempotent expiry sweep for stale holds, and a concurrency/race-condition test suite.
- Implemented the safety/priority, service-area, address-validation, booking-authority and whitelist guards that constrain what the AI agent is allowed to promise a caller.
- Built DST-safe availability computation (Sydney timezone) and enforced valid job-status transition rules.
- Designed the tenant-scoped Job/Booking data schema.
- Worked via PR review and CI in a cross-functional team of 9.

Frontend Developer — University of Tasmania, Hobart TAS

07/2022 – 04/2023

- Delivered features against weekly client deliverables in a structured agile project; daily cross-team syncs with front-end and back-end developers.
- Tech: React.js, Ant Design, Lodash, Less, React-Router-DOM · Tools: GitHub, Trello, Docker, Postman · DB: MongoDB

Web Developer — My IT Studio, Hobart TAS

05/2022 – 04/2023

napoletanapizza.com

- Built and maintained a customer ordering system, integrated PayPal for online payments, and optimised SEO on a Shopify storefront.
- Tech: Next.js, Nest.js, Styled-components, Chakra UI, Ant Design · Tools: Vercel, Git, GitHub · DB: MongoDB

Other Experience

2023 – 2026

Warehouse Manager / Delivery Driver — Nierinna Produce, Hobart TAS (05/2023 – 02/2024)

Bus Driver — Metro, Launceston TAS / Ventura, Melbourne VIC (06/2024 – 06/2026)

EDUCATION

Master of Information Technology and Systems — University of Tasmania

07/2019 – 07/2021

Bachelor of Mathematics — Tamkang University, Taiwan

09/2011 – 01/2016

TRAINING

JR Academy — Full Stack & AI Development Program (Remote)

09/2021–01/2022, 05/2026–Present

The ACS Professional Year Program – ICT — QIBA, Hobart

08/2021 – 08/2022
